Product Strategy & Development · Cybersecurity & AI

Tel Aviv · amitka111@gmail.com · [+972 54-4878882](tel:+97254-4878882) · [LinkedIn](#) · amitkap.com

Twelve years shaping cybersecurity products, from enterprise security management to startup platforms for remediation and AI-driven risk assessment. Connect market insight with product decisions: frame the problem, evaluate alternatives, align stakeholders, and translate direction into workflows teams can build. Bring deep security-domain knowledge and hands-on prototyping to product management.

EXPERIENCE

Shift | Founding Designer

10/2024-Present · AI-native third-party security

Used competitive research to propose organizing assessments around people supervising AI agents, with explicit boundaries for automation and human accountability.

Presented the strategy to leadership and helped recommend a first test of customer trust: agent-drafted vendor emails approved by reviewers before sending.

Compared approval queues, timelines, and fleet views to shape how teams oversee assessments and intervene in risk decisions.

Onyxia | Product Design Team Lead

04/2024-10/2024 · CISO data platform

Connected CISO benchmarks and SLAs to operational execution: task owners, deadlines, progress, and blockers across security and business systems.

Veriti | Founding Designer

11/2021-04/2024 · Multi-vendor security remediation

Helped define how teams close exposures using existing security tools: identify the configuration gap, explain the proposed change, and secure approval before remediation.

Developed a composable filtering approach for tens of thousands of threat indicators, supporting investigation within the existing product.

Semperis | UX Team Lead

08/2020-11/2021 · Identity security

Led the UX transition from Active Directory recovery to prevention, defining how severity, urgency, and required actions guide attention to identity risks.

Built and led the in-house UX team as the product expanded.

Check Point Software | UX Expert

03/2014-08/2020 · Enterprise security management

Worked with R&D to reorganize management across 20+ tabs around administrators' daily tasks, products, objects, and policies.

Helped shape WatchTower's mobile scope around notifications and immediate actions; contributed to usability testing before its iOS and Android launch.
